

The CleanBlock

People are more aware of germs and how they spread since the COVID-19 pandemic hit. In general, the more things that you touch on a regular basis, the higher the risk you'll also pick up bacteria and viruses.

Whether at a store, in the office, school, or at home, shared pens are a hot bed for spreading viruses, bacteria, and fungus, but they are rarely thought about. Researchers have found that pens used in public have 46,000 times more germs than the average toilet seat!

So what can you do about it?

The CleanBlock

The CleanBlock is an intuitive patented device that quickly and effectively sanitizes pens and styluses. The CleanBlock is a convenient way to reduce the spread of illness and infection by reducing the spreading of germs on pens and styluses. Simply insert the pen in one side of the CleanBlock and pull through the other. No effort required!

Inside the CleanBlock is a specially formulated 70% alcohol gel that sanitizes and cleans as the pen passes through. It comes out the other side dry, 99.9% free of germs, and ready to use.

The CleanBlock is a Made in the USA pen and stylus sanitizer that's easy to use, cost effective (1 penny per cleaning), long lasting (1400 swipes per refill), and portable so you can mount it on a desk or wall, or take it everywhere with you.

If you wouldn't put your hand all over a dirty toilet seat without wiping it down first, why would you use a pen before cleaning it first?

**Help keep your friends, co-workers, customers, kids, and yourself safe
by getting the CleanBlock today!**

**Because what you touch can make you sick.
CleanBlock is here to change that.**
